Scandent Solutions announces @Vantage Release 2.0 for the US market

Scandent Solutions, a broad based IT solutions company has announced the release of Version 2.0 of its Health and Human Services eligibility and case management product. The @Vantage product is developed and marketed by Albion, a wholly owned division of Scandent Solutions that focuses on the delivery of services to US States.

The @Vantage product line provides a full suite of Customer Relationship Management (CRM) and Enterprise Resource Planning (ERP) capabilities for the Health and Human Service (HHS) departments within US States. The latest release of @Vantage includes the completion of the @Vantage integrated development environment (IDE). The @Vantage IDE provides a visual development toolset to build dynamic Intake and Enrollment workflows and integrate them with online eligibility processing.

Systems that are being implemented by @Vantage customers include Medicaid eligibility, TANF and Food Stamps eligibility, Welfare to Work, Homeless Management Information Systems (HMIS), SSA Access to State Records Online (SASRO), etc.

Dilip Keshu, CEO of Scandent Solutions , said, *“The @Vantage product set is a major differentiator for us and enables us to compete and win against the very largest global integrators. We are excited about our established growth within the US States and the further possibility of marketing @Vantage globally.”*

According to Rob Marchant, President of Albion , the timing of this release of @Vantage is significant, *“We recently completed two statewide installations for two separate US States. The scope of these implementations was quite different and yet the @Vantage framework and toolset could handle the varied complexity and sophistication of each solution. In @Vantage we have a system that can handle the demands of thousands of concurrent online users and the scale and complexity of Medicaid implementations that have in excess of 12,000 eligibility rules.”*
